(1) Contacts shown in unpowered state. Relays change state when drive is powered.

(2) These inputs/outputs are dependent on a number of parameters. See “Related Parameters.”

(3) Differential Isolation - External source must be less than 10V with respect to PE.

(4) Differential Isolation - External source must be maintained at less than 160V with respect to PE. Input provides high common mode immunity.

⁽¹⁾ Refer to the Attention statement on [page 1-10](#) for important bipolar wiring information.

⁽²⁾ **Important:** Programming inputs for 2 wire control deactivates all HIM Start buttons.

⁽³⁾ Examples show hardware wiring only. Refer to pages [1-13](#) and [1-14](#) for parameters that must be adjusted.

⁽⁴⁾ If desired, a User Supplied 24V DC power source can be used. Refer to the "External" example.
